A2**Started on** Wednesday, 20 August 2025, 10:09 AM**State** Finished**Completed on** Wednesday, 20 August 2025, 10:46 AM**Time taken** 36 mins 49 secs**Marks** 1.00/1.00**Grade** 10.00 out of 10.00 (100%)

Question 1 | Correct | Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
        printf("*");
    }
    else
    {
        for(int i=1; i<=n; i++)
        {
            for(int j=1; j<=n; j++)
            {
                printf("*");
                printf("*");
                break;
            }
        }
    }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer: (penalty regime: 0 %)

```
1  #include<stdio.h>
2  int c=1;
3  void func(int n){
4      if(n==1){
5          c++;
6      }
7      else{
8          c++;
9      }
10     for(int i=1;i<=n;i++){
11         c++;
12         for(int j=1;j<=n;j++){
13             c++;
14             c++;
15             c++;
16             c++;
17             break;
18         }
19     }
20 }
21 int main(){
22     int n;
23     scanf("%d",&n);
24     func(n);
25     printf("%d",c);
26
27 }
```

	Input	Expected	Got	
✓	2	12	12	✓
✓	1000	5002	5002	✓
✓	143	717	717	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
